A STUDIO GUIDE / SECOND EDITION

On keeping.

THE PIECE. THE CHANGE. THE NEXT CHAPTER.

A REPAIR BEGINS WITH A PERSON.

Something you reach for.

Not every piece has a grand story. Sometimes it is simply the shirt that fits, the jacket you borrow or the jeans you already know.

This guide helps you describe a change without needing the technical name. The actual garment and a repairer determine what is possible.

Keep the piece. Understand the change.

04

01 / The piece

What makes it worth keeping.

08

02 / The choice

Finish, repair type and a clear request.

14

03 / The agreement

Changes, questions and explicit decisions.

18

04 / The next chapter

Records, care information and return visits.

Keep the good part.

The familiar weight. The right sleeve. The way it falls.
Start with what you want to keep.

A detail is enough.

A considered repair protects what matters while making the change understandable. Illustrative garment, not a documented repair result.

LOOK BEFORE YOU LABEL IT.

The cloth has a say.

A photo can explain where the problem is. It cannot confirm the strength of the surrounding cloth, the feel of the repair or the best method.

Describe, do not diagnose.

The studio needs your observation, not an expert conclusion.

Keep uncertainty visible.

“Not sure” is a useful answer about fibre, method or finish.

Quiet repair.

Let attention stay on the piece.

A close colour match and familiar construction can reduce the contrast of a repair. It may still be visible, and the material may feel different.

ASK BEFORE YOU AGREE

What is the closest practical match? What will still be visible? Could the finish affect how the piece falls?

TWO INTENTIONS. NO PROMISED INVISIBILITY.

New character.

A contrasting thread, patch or fastening can make the repair part of the piece. The colour is a preference; suitability still depends on the garment.

Ask to see a sample. A beautiful contrast still needs a practical method.

A CODE HELPS THE STUDIO. WORDS HELP YOU.

MOI

A hole or worn patch.

The code is an index, not a diagnosis. The description stays next to it on the screen, tag and work ticket.

Not sure which kind? Begin with Q01: an assessment.

Start with what you notice.

M01

A hole or worn patch

Fabric is thin or has opened up.

M02

An open seam

Two pieces of cloth are separating.

F01

A zip that will not work

The pull, teeth or slider needs attention.

F02

A missing button

A fastening needs a closer look.

A01

A length to adjust

A fitting comes before cutting.

Q01

Help me work it out

No technical name required.

Three details. A better start.

01

Name the piece.

Use a name you will recognise: “My everyday shirt” is enough.

02

Describe the place.

Elbow, seam, fastening or edge. Say “Not sure” when needed.

03

Explain the intention.

Close match, visible contrast or advice before choosing.

BRING THE DETAILS INTO THE CONVERSATION.

A request you can carry.

afterform

AF-L001 / REVISION 1

The everyday shirt

M01 / elbow or sleeve

Preference: closest practical match

The prototype prints saved details. Local requests have no public QR. This brief is not permission to begin work.

You asked for...

A close match at the elbow.

Finish

Keep attention on the original garment.

Scope

The area you can see, before assessment.

Price and timing

Not confirmed by describing a repair.

...AND THE ASSESSMENT ADDS CONTEXT.

Here is what would change.

Finish

A small visible difference may remain.

Scope

A wider reinforcement may be needed.

Price and timing

Review the complete proposal before deciding.

UNCERTAINTY IS A REASON TO ASK.

A pause is useful.

A request describes the intention. A proposal explains the practical limits. The decision belongs after the comparison.

One clear next step.

I understand the change.

Review the whole proposal, then record a decision.

I need to ask something.

Keep the proposal pending while the question is resolved.

The details changed again.

Review the new scope. An earlier approval is not carried forward.

Keep the useful details.

AF-S01

The everyday shirt

A stable reference travels with the piece. A repair code describes the type; a revision number describes a changing proposal. They are different kinds of information.

SCAN, OR TYPE THE ID.

AF-S01

The everyday shirt. An illustrative garment record.

The record stays. The story continues.

The sample record opens from its printed tag or typed ID. A new repair request can begin with these garment details without changing the old record.

Preview QR requires access to the portfolio. Repoint and scan-test before public printing.

Keep the original label.

The repair record adds context. It does not replace garment-specific care instructions, confirm an unknown fibre content or create new wash symbols.

Known

The garment ID and the documented repair description.

Still to check

The original label and any repair-specific advice from the repairer.

Notice something different?

Keep the record and describe the place that needs attention. A new request starts a fresh assessment; it does not rewrite the earlier repair.

Uncertainty is welcome at every stage.

KEEP THIS PAGE CLOSE.

Before you agree.

☐

The piece

We are talking about the same garment and location.

☐

The change

I understand the proposed finish and scope.

☐

The commitment

Price and timing have been explained.

☐

The next step

I know how to ask a question or review a revision.

A considered design proof.

170 × 240 mm. Twenty-four pages. Proposed saddle stitch. Six folded sheets. Pages are supplied in reading order; the printer performs imposition after paper and binding are confirmed.

Proposed stock: uncoated 120 gsm text with a 200 gsm cover. Check grain, creep, gutter and colour on a physical proof. This RGB PDF is not a press-certified file.

Concept and implementation: Jocelyn Martinez, with AI assistance. Bodoni Moda, Karla and Inconsolata are used under the SIL Open Font License. Material images are original generated illustrations.

No operating studio, customer research, repair results or environmental savings are claimed.

afterform

Keep the
clothes.

Change
the ending.
