

SELF-DIRECTED CONCEPT / BRAND, PRESENTATION, SOCIAL, PRINT, WAYFINDING

Civic Bloom

A public-program communication system for a fictional design festival: client-ready deck, social campaign, print pack, large-format wayfinding, review workflow, and final QA.

A civic event identity that needs to work everywhere.

The fictional program turns public plazas into a weekend of installations, workshops, talks, and guided walks. The design challenge was to create a system that feels joyful and public-facing while remaining practical for deck review, production, campaign rollout, and on-site navigation.

COMMUNICATION JOBS

- 01 Persuade**
Introduce the festival concept and value to partners.
- 02 Promote**
Adapt the identity into social posts, stories, and event assets.
- 03 Orient**
Help visitors move between venues, schedules, and program types.
- 04 Deliver**
Create print-ready files and clean handoffs that survive revision.

Different readers, one system.

The system has to speak to leadership during review, production teams during handoff, and the public during the event. The visual language stays consistent, but the hierarchy shifts by use case.

Leadership review

Needs the idea, budget logic, program value, and visual confidence.

Production team

Needs clean specs, naming, export status, and editable source logic.

Visitors

Need a quick read: what is happening, where to go, and what comes next.

03 / BRAND SYSTEM

A modular language of civic shapes.

The identity uses public-space geometry - arches, circles, leaves, directional arrows, and civic blocks - to create a flexible system for presentation, social, print, and wayfinding.

Color role

Coral for attention, blue for civic structure, yellow for energy, sage for public space, charcoal for grounding.

Typography role

High-impact headings paired with a functional sans serif for schedules, labels, and production specs.

Image role

Bright public-space photography and clean cutouts create an optimistic civic tone.

Decks as tools for decision-making.

The presentation design is modular: cover, section divider, visual concept, schedule/timeline, stakeholder review, and production checklist. Each format uses consistent positioning so updates are fast and accurate.

Presentation rule: each slide should have one dominant message, one supporting visual system, and no more than three secondary points.

05 / SOCIAL MEDIA & DIGITAL PRODUCTION

Fast variations, protected hierarchy.

A social system should give the designer room to produce quickly without letting brand consistency fall apart. Civic Bloom includes modular crops, safe zones, post families, and campaign-specific cutdowns.

Print-ready thinking from the first layout.

The system includes posters, one-pagers, leave-behinds, badges, and signage-style pieces. Production notes are not treated as an afterthought; bleeds, trims, resolution, and final export settings are built into the workflow.

Bleed	0.125 in for standard print pieces
Resolution	300 DPI effective image check
Color	CMYK / printer profile before final export
Packaging	Linked assets, fonts, exports, and archive copy

07 / ENVIRONMENTAL GRAPHICS

A system for distance, speed, and place.

Large-format graphics rely on simplified geometry, high contrast, and directional cues. The goal is not only decoration; it is orientation, recognition, and movement across a public route.

Banners

Long-distance identity and event recognition.

Directional signs

Arrow-first hierarchy for movement.

Zone markers

Color-coded program areas and venue entrances.

Designed for feedback without losing momentum.

A junior designer often owns production detail while collaborating with leadership, strategy, and project teams. Civic Bloom includes review checkpoints, open questions, and version rules so feedback can move quickly.

1

Intake

Clarify audience, format, deadline, and owner.

2

Draft

Create first pass with notes on open decisions.

3

Review

Capture comments by page, format, and priority.

4

Revise

Resolve comments, update exports, and mark changes.

5

Deliver

Run final QA and archive source files.

Animation should clarify the idea, not decorate it.

The presentation motion system is built as native PowerPoint animation: section reveals, diagram builds, staggered list entrances, and restrained page transitions. Every animated slide also exports cleanly as a static PDF.

MOTION BUILD EXAMPLE

Show the path in pieces.

01

Route appears

02

Program zones enter

03

CTA resolves

Animations are timed to match the presenter's speaking order: one message, one reveal, one decision.

The last 10% is a design skill.

Production-forward design succeeds when the final files are easy to open, trust, revise, export, and archive. The checklist covers language, layout, accessibility, and technical delivery.

● Proofing

Names, dates, captions, URLs, grammar, and numbering.

● Layout QA

Alignment, spacing, type sizes, crops, and contrast.

● Export QA

Bleed, trims, linked assets, format, filenames, and final version.

A system is strongest when it makes future work easier

Civic Bloom demonstrates how presentation design, social production, print assets, wayfinding, motion instincts, and file hygiene can operate as one connected design system. The next iteration would test the system with a timed production exercise and full-scale signage readability checks.

Next: build master templates in PowerPoint, recreate print pieces in InDesign, finalize vector icon families in Illustrator, and prepare a Webflow-ready landing-page style guide.
